Beam Pallet Stop

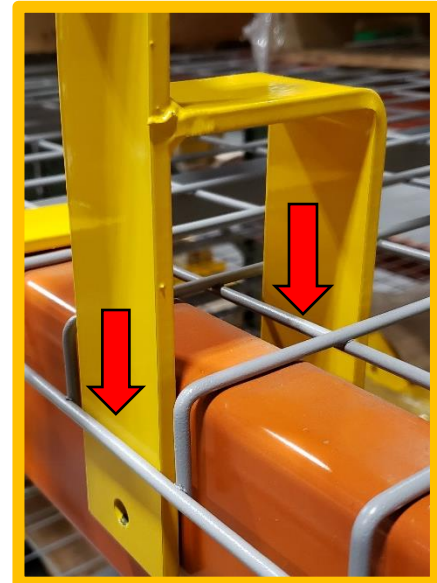

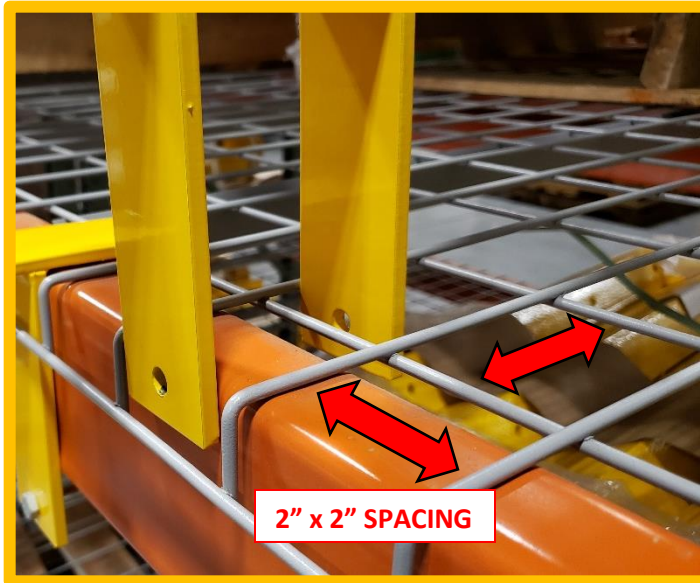

Create a real stopping point for pallets!

Stops pallets from entering the flue spaces!

- Fits 2.75" deep and 4.75" tall beams.
- Secures waterfall edge wire deck in place.
- Easy installation – slides directly over rack.
- Available in flush mount or with a 3" overhang

Installation is simple taking only minutes!

(1) Slide the 'legs' of the Beam Pallet Stop onto the beam such that the leg on the outside of the rack is between the waterfall edge the beam and the leg facing the inside of the rack is over the wire deck, thus security the deck in place, and snug against the rack beam (shown in images below).

(2) Slide bolt through the holes on the legs of the Pallet Beam Stop. Secure the bolt in place with the nylon hex nut. Tighten nut until Pallet Beam Stop is snug and securely in place.
